

“The introduction of the BHIS™ bra and accompanying training package contributed to a significant reduction in the proportion of surgical site infection occurring in our female patients at our hospital.”

*Melissa Rochon, Clinical Nurse Specialist in Surveillance*

“I advise my female patients to wear the BHIS™ bra for the weeks following surgery for comfort, support and safety while the wound heals.”

*Mr Toufan Bahrami, Consultant Cardiothoracic & Transplant Surgeon*

“Providing immediate support for the sternal wound in female patients is of paramount importance to us... [BHIS™ bra] is easy to apply to the anaesthetised patient (immediately post-procedure whilst still in the theatre) that provides a level of comfort and support of the early days of recovery and beyond, has been so beneficial.”

*Clair Mullins. Theatre Manager*

“The BHIS™ bra proved to be a great help upon my return home. Very comfortable and supportive, thus alleviating any concerns over the chest wound...Thank you so much!”

*Mrs Lynch, Patient*
